Professional Experience

01/2018 – Present
Dublin

Google, *React Developer*
Dublin, Ireland | 2020 – Present

- Design and develop high-traffic web applications using **JavaScript / TypeScript**, primarily with **React** and internal UI frameworks.
- Architect scalable and maintainable frontend solutions serving millions of active users.
- Improve application performance (Core Web Vitals, lazy loading, code splitting), reducing page load times by 25%+.
- Build reusable UI components and shared libraries adopted across multiple product teams.
- Collaborate closely with backend engineers to design and integrate REST / GraphQL APIs.
- Lead migration initiatives from legacy JavaScript codebases to TypeScript and modern frontend architecture.
- Implement comprehensive testing strategies (Jest, Playwright), increasing code coverage to 85%+.
- Conduct code reviews, mentor junior engineers, and contribute to technical hiring processes.
- Work cross-functionally with Product, UX, and SRE teams in an Agile environment to deliver reliable and scalable features.

Frontend Engineer with 5+ years of experience building scalable, high-performance web applications at **Google**. Specialized in JavaScript and TypeScript ecosystems, with deep expertise in React and modern frontend architecture. Proven track record of delivering user-centric solutions for products serving millions of users, optimizing performance, and driving code quality improvements. Strong collaborator experienced in cross-functional Agile environments.
